## **DETAILED ACTION**

Applicants election without traverse of Group I, claims 1-14 drawn to a method for treating the metabolic syndrome or Type 2 diabetes in a patient, comprising the steps of administering a composition comprising: (1) at least one central dopaminergic neuronal activity activator; (2) at least one central noradrenergic neuronal activity inhibitor; and (3) a pharmaceutically acceptable carrier is acknowledged. Upon further consideration of Group I, election of species has been made as follows:

### ***Election/Restrictions***

This application in Group I (claims 1-14) contains claims directed to the following patentably distinct species:

1) Various compounds that stimulate an increase in central dopaminergic neuronal activity level set forth in claims 4 and 5.

2) Various compounds that stimulate a decrease in central noradrenergic neuronal activity level set forth in claims 8 and 9.

The species are independent or distinct because each of the active compounds in 1) have unrelated chemical/physical properties having its own unique characteristics; each of the active compounds in 2) have unrelated chemical structural moiety having efferent effects.

Art Unit: 1617

Applicant is required under 35 U.S.C. 121 to elect a single ultimate disclosed species from 1) and 2) above for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, a compound that stimulates an increase in central dopaminergic neuronal activity level is generic for the compounds in 1); a compound that stimulates a decrease in central noradrenergic neuronal activity level is generic for the compounds in 2).

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

Art Unit: 1617

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103 (a) of the other invention.
